# The National Textbook Project

This is the second installment of textbooks completed by the Center as part of a three-stage effort to produce the books called for by the New Curricula. We are placing these books in the hands of students with the great hope that we are moving, step by step, toward the goal of acquiring sound and modern learning, using sophisticated educational means and up-to-date methodology that encourage and reinforce individual thinking and research, the acquisition of skills, the development of ethical and national attitudes, the feeling of national belonging as well as the feeling of belonging to humanity at large.

The on-going revolution in information, communication and educational technology has undoubtedly limited the role of the textbook and lowered the rank it used so recently to occupy. However, in our society and in many other societies, the textbook remains the basic means of education, and it is our duty to exert our utmost effort and care to come up with the best product as to form and content. Yet we should not lose sight of the fact that the textbook is not sufficient by itself but should rather be used as a stepping stone to access other sources of information. What is important is to keep a clear vision and maintain the right course toward our objective. The means should not turn into the end and the student should always remain the focus of the learning/teaching process.

No one ignores or denies the fact that textbook writing requires very high academic and educational qualifications and very wide field experience. The authors committees undeniably possess such qualifications and qualities, yet last year's textbooks did contain some faults and gaps which were duly pointed out by researchers in many articles, and, indeed, we have benefited from some of them. Such is the nature of human work, no matter how good the intentions or how great the effort exerted.

Constructive criticism is a real contribution to raising the standard of authorship, minimizing errors and filling gaps. We only hope that criticism will always be objective and motivated by a desire to enhance educational reform in order to achieve better products.

A favorite adage handed down from our old scholars: "He who criticizes you is as helpful as a co-author". Let all criticism directed at the Center be of this caliber.

In closing, we hope that we all will have benefited from our experience and that the textbooks of the third and final stage be closer to realizing our hopes and more beneficial to our students. We are now preparing ourselves to assess the parts so far achieved of the new curricula and to assure that our educational movement is proceeding on the right track for achieving the best results.

June 2, 1999

President, Center for Educational Research and Development Nemer FRAYHA

## **Preface**

The world, we are living in, is changing rapidly and continuously. In order to be able to keep up to date with what is going around us, a proper use of the media, at all levels, is a necessity. However, for students, the book is still a basic mean to start with. Because of the demands of changing physics curricula, it has been necessary to introduce this book as a part of the scientific literacy course suggested by the educational board and the new Lebanese physics curriculum.

This book consists of the main parts: Electricity, Optics, and Sound. Each part consists of four chapters and each chapter, contains the following:

**Objectives** for teaching the chapter, listed at its beginning

to be performed by the student or the teacher.

# Questions

and exercises that give the student an opportunity to apply some of his/her knowledge.

# Reading

that enwiden the scope of the student and serve as a general knowledge.

All of this helps the learner, to take relatively safe decisions at various stages of his life.

We hope that this book serves as a primary worksheet, useful as a starting point, to achieve in the near future, a better textbook, by constructive criticism needed for the development of the scientific literacy course in order to serve the purpose for which it was suggested.

# **Table of contents**

# Unit 1

| Chapter | 1 Electric current                                                        | 13 |
|---------|---------------------------------------------------------------------------|----|
|         | 1.1 What is an electric current?                                          | 14 |
|         | 1.2 Direct current                                                        | 14 |
|         | 1.3 Potential difference                                                  | 15 |
|         | 1.4 Observation of the voltage on the screen of an oscilloscope           | 15 |
|         | 1.5 Alternating current and voltage                                       | 16 |
|         | 1.6 How can we measure the period T?                                      | 16 |
|         | 1.7 How can we measure the amplitude of an AC voltage?                    | 16 |
|         | 1.8 Observation of a current produced by a magnet                         | 17 |
|         | 1.9 Electric energy                                                       | 17 |
|         | 1.10 Electric power                                                       | 18 |
|         |                                                                           |    |
| Chapter | 2 Consumption and production of electric energy                           | 19 |
|         | 2.1 Electrical devices (motor, electrolytic cell)                         | 20 |
|         | 2.2 Production of electric energy                                         | 22 |
|         | 2.3 Introduction to power stations                                        | 24 |
|         |                                                                           |    |
| Chapter | Transformers and power transmission                                       | 28 |
|         | 3.1 Transformer                                                           | 29 |
|         | 3.2 Description of power transmission from the power station to the house | 29 |
|         | 3.3 Voltage and current modification                                      | 30 |
|         | 3.4 Electric meter (service meter)                                        | 30 |
|         | 3.5 Cost of electric energy                                               | 31 |
|         |                                                                           |    |

| Chapter 7 Optical systems                                          | 55 |
|--------------------------------------------------------------------|----|
| 7.1 Pinhole camera                                                 | 56 |
| 7.2 Comparison between the focusing of a camera and that of an eye | 56 |
| 7.3 Microscope                                                     | 58 |
| 7.4 Endoscope and gastroscope                                      |    |
| 7.5 Optical system                                                 | 59 |
|                                                                    |    |
| Chapter 8 Lasers                                                   | 62 |
| 8.1 What is meant by coherent light?                               | 63 |
| 8.2 Laser light versus ordinary light                              | 63 |
| 8.3 How does a laser work?                                         | 63 |
| 8.4 Types of lasers                                                | 64 |
| 8.5 Laser's applications                                           | 66 |

# Unit 3

| Chapter 9 Vibratory nature of sound                          | 69 |
|--------------------------------------------------------------|----|
| 9.1 Sources and receivers of sound                           | 70 |
| 9.2 How is sound produced?                                   | 70 |
| 9.3 Is a medium necessary for the progation of sound?        | 71 |
| 9.4 What are the chracteristics of sound?                    | 72 |
| 9.5 Is sound propagation quick or slow?                      | 73 |
| 9.6 On what factors does the speed of sound in a gas depend? | 73 |

| Chapter 4 Domestic electricity and its dangers                      | 33 |
|---------------------------------------------------------------------|----|
| 4.1 Electricity in the house                                        | 34 |
| 4.2 Standard home circuit diagram                                   | 34 |
| 4.3 Simple circuit showing the connection of light bulbs in a house | 35 |
| 4.4 Buying an electrical appliance                                  | 35 |
| 4.5 Electricity in the car                                          | 36 |
| 4.6 Danger of electricity and the corresponding measures            | 38 |
|                                                                     |    |

# Unit 2

| Chapter | Sources and aspects of light                                    | 41 |
|---------|-----------------------------------------------------------------|----|
|         | 5.1 Sources of light                                            | 42 |
|         | 5.2 Distinction between natural and artificial sources of light | 42 |
|         | 5.3 What happens to light energy?                               | 43 |
|         | 5.4 Nature of light                                             | 43 |
|         | 5.5 Light as a form of energy                                   | 44 |
|         | 5.6 Light ray                                                   | 44 |
|         |                                                                 |    |
| Chapter | 6 Electromagnetic waves                                         | 47 |
|         | 6.1 Recall of the characteristics of waves                      | 48 |
|         | 6.2 Quantum theory of light                                     | 48 |
|         | 6.3 Electromagnetic waves                                       | 49 |
|         | 6.4 Microwave oven                                              | 49 |
|         | 6.5 Nature of radiant heat energy                               | 50 |
|         | 6.6 Infrared radiation                                          | 50 |
|         | 6.7 Use of infrared radiation                                   | 51 |
|         | 6.8 The greenhouse effect                                       | 52 |
|         | 6.9 Ultraviolet radiation                                       | 52 |
|         | 6.10 X-rays                                                     | 53 |
|         |                                                                 |    |

| Chapter 10 The Human Ear as a Sound Dectetor                                                            | 77 |
|---------------------------------------------------------------------------------------------------------|----|
| 10.1 What are the main parts of the ear?                                                                | 78 |
| 10.2 How does the human ear percieve sound?                                                             | 79 |
| 10.3 Does the ear hear all sounds?                                                                      | 79 |
| 10.4 Do sound and ultrasound waves have the same proporties?                                            | 80 |
| 10.5 Where do we use ultrasound waves?                                                                  | 80 |
|                                                                                                         |    |
| Chapter 11 Acoustic energy and physiological qualities of sound                                         | 82 |
| 11.1 Energy, power, and acoustic intensity                                                              | 83 |
| 11.2 Does the ear recieve sound in the same way?                                                        | 83 |
| 11.3 Pitch of a sound                                                                                   | 83 |
| 11.4 Intensity of a sound                                                                               | 84 |
| 11.5 Timber of a sound                                                                                  | 85 |
| 11.6 Does sound hearing always stay the same?                                                           | 85 |
| 11.7 What are the sources of noise?                                                                     | 85 |
| 11.8 What is the effect of noise on the human ear?                                                      | 85 |
|                                                                                                         |    |
| Chapter 12 Musical instruments, Laws of vibrating strings and sound pipes                               | 87 |
| 12.1 Musical instruments                                                                                | 88 |
| 12.2 Can you recognize a musical instrument by the sound that it emits?                                 | 88 |
| What are the laws relative to the frequency of sound emitted by a vibrating string and by a sound pipe? | 89 |
