

Imane ABBAS received her Ph.D. in Engineering of Biological Functions, specifically in Toxicology, from the University of Littoral Opal Coast in Dunkirk – France, in November 2010. She is the Head of the environmental toxicology laboratory at the Lebanese Atomic Energy Commission affiliated to the CNRS-L. Her current research is on the interface between environment, toxicology, and health and focuses on Lebanese atmospheric pollution and its effects on human health. As a director of the doctoral fellowships program at the CNRS-L, she is renowned for her expertise in developing and advancing fellowships and mobility programs. With a strategic approach, she excels in assessing requirements, securing funding and managing program implementation.
